Selection Manager

This code snippet shows how to select visualization elements via a program.

Product description

This example show how the `SelectionManager` is used to select visualization elements via a program.

More information

The program `SelectionHandling` evaluates the events from the buttons "Up", "Down", "Left", "Right" and "Click" for the first visualization client.

The method `SelectNextElement` will change the current selection. If the button "Click" is pressed, then a mouse-up event is fired for the selected element and is displayed as "LastClick".

The function `SelectElementAt` selects the element with the element-id entered in the field above.
