

## Client Independent Visualization Switching

The CODESYS Package contains an example project which shows how to switch visualizations of different display variants independently.

### Product description

The example project switches the visualizations of all TargetVisu display variants every second. The visualization of WebVisu display variants will not be switched.

### More information

The program `VisuHandling` controls the switching of the visualizations. The call `VisuElems.g_ClientManager.GetNextClient()` gets the next active display variant. The visualization of all TargetVisu display variants will be switched every second. It is important that the program `VisuHandling` is called via the visualization task.

## General information

### Manufacturer:

3S-Smart Software Solutions GmbH  
 Memminger Strasse 151  
 87439 Kempten
