Text Editor Example

The "Text Editor" example shows a visualization for editing, creating, and saving texts.

Product description

With the sample project TextEditor.project included in the package, you can open, close, create, and save text files. By entering a text into the search field, corresponding words and lines can be found in a file. Moreover, a text field allows for writing and editing of texts, and the "ReadOnly" mode can be adapted by means of a switch.

More information

The example includes a visualization that is divided into two halves. In the upper half, texts can be written and edited. In the lower half, it is possible to open, close, and save text files by means of buttons. Moreover, the "ReadOnly" mode can be switched on and off there, in which a lamp indicates the current state of the mode (the lamp is lit when ReadOnly is switched on). A text field is located in the last line for searching for words in a text file.
