

# Detailed Table of Contents

Preface .....	13	LAB: Connecting and Logging into the Control Win V3 .....	33
Chapter 1: Introduction to CODESYS.....	15	LAB: Running the Application .....	34
Acknowledgment .....	16	Chapter 2: Help and Settings .....	35
Agenda .....	16	Help.CODESYS.com (and Help->Contents) .....	35
Why CODESYS and IEC 61131-3? .....	17	Search Operators .....	36
Company Portrait .....	18	CODESYS Store .....	36
Steady Growth.....	18	Caution Installing Packages .....	37
Dominant Market Share .....	18	CODESYS Forum .....	37
CODESYS Staff .....	19	Faq.codesys.com.....	37
CODESYS in the Field .....	19	CODESYS Clips on YouTube.....	38
Industries.....	19	Support .....	38
Industry Standardization in the 1980s and 2000s.....	20	System Partners .....	39
Controls Standardization.....	20	Tools -> Options.....	39
CODESYS Ecosystem .....	21	Options -> Load and Save .....	40
CODESYS Development System .....	22	Options -> Smart Coding.....	41
Benefits of IEC 61131-3 .....	23	Customize Menus .....	41
Version Handling .....	23	Project Settings.....	42
Project Archive .....	23	Source Download.....	42
Caveat.....	24	PLC Settings and Properties.....	43
Quick Start – The Device Tree .....	24	Page Layout.....	44
Starting a New Project .....	25	Helpful Hints .....	45
CODESYS ControlWin .....	25	Chapter 3: Projects and the IDE.....	49
Scanning for Devices .....	26	The Devices View – The project roadmap .....	49
Logging In and Running .....	27	Adding a Device .....	50
Process Cycle – Implied While Loop.....	28	Device Editor.....	51
Intro to Debugging .....	29	Programmable vs Parameterizable.....	52
Lab Materials.....	29	Programmable Objects .....	53
Lab Notes.....	30	Parameterizable Objects.....	54
LAB Overview .....	30	Adding a POU .....	55
LAB: Creating a Project.....	31	Programmable Object Management .....	56
LAB: Creating a Simple Program .....	31	Folders .....	57

Active Application .....	57	Array Initialization (preview).....	87
Interacting with the Active Application .....	58	Declaring Instances of Function Blocks .....	88
Multiple Applications on One Device .....	58	Declaring a TON.....	88
Online Change.....	59	LAB: Declaring Variables.....	89
Online Mode .....	60	LAB: Declaring Variables (continued).....	90
Updating a Project .....	60	Chapter 5: Ladder Logic and FBD .....	93
Updating a Device.....	61	IEC 61131-3 and CODESYS Languages.....	93
Project Archives .....	61	The Right Tool for the Job .....	94
Saving a Project Archive.....	62	History of LD .....	94
Extracting a Project Archive.....	63	Ladder Logic 101.....	95
Lab Overview .....	63	LD for Boolean Logic.....	95
Lab: Update a Project .....	64	Function Block Diagram.....	96
Lab: Extracting a Project Archive .....	65	FBD for Logic.....	96
Chapter 4: Variables and Data Types.....	67	Adding an LD or FBD POU.....	97
Variables and Data Types.....	67	LD Editor .....	97
Auto Declare .....	68	Using the Toolbox.....	98
How to Declare a Variable .....	69	Ladder and Math .....	98
Variable Names .....	70	Drag and Drop from ToolBox and Declaration .....	99
Data Types: Integer and Real.....	71	Branches and SCE .....	99
Data Types: Time and Memory.....	72	Box vs Box with EN/ENO .....	100
Data Types: Strings .....	73	Adding Comments .....	101
String Literals and Functions.....	74	Close all Open Editors between Labs .....	101
Type TIME and TIME() Function.....	75	LAB: Overview .....	101
SYSTimeRTC: System Real Time Clock .....	76	LAB: Create a Traffic Light in Ladder Logic .....	102
Variable Scope .....	77	LAB: Extra Credit.....	103
Scope: Local (Internal Variables) .....	78	Chapter 6: Sequential Function Chart .....	105
Scope: VAR_INPUT.....	79	Sequential Function Chart (SFC).....	105
Scope: VAR_OUTPUT (Output Variables) .....	80	What is a State Machine?.....	106
Scope: VAR_IN_OUT .....	81	State Machine in SFC.....	107
Scope: Global .....	82	How to add SFC Elements .....	107
Flags .....	83	SFC Step.....	108
Retain and Persistent Variables .....	84	SFC Transition.....	109
Type Conversions.....	85	Step Actions.....	111
Display Radix.....	85	Behavior of Actions when a Step is Copied.....	113
Refactoring vs Search/Replace .....	86	Creating Actions and Transitions Manually.....	114
Refactoring POU Names .....	86	Jumps.....	114
Arrays (preview).....	87	Branches .....	115

Adding Alternate and Simultaneous Branches ...	116	Simulation vs ControlWin .....	145
Dangling Branches.....	117	ControlWin on your Computer .....	146
Macros.....	118	Breakpoints.....	147
SFC Setup, Properties, and Flags .....	119	Data Breakpoints and Breakpoint View.....	148
More on SFC Implicit Variables .....	120	Single Stepping and Call Stack .....	149
Hint: Off Diagram Global Operation.....	121	Watch List .....	150
Conditional Equations in Actions, and Alternatives to SFC.....	122	Process Cycle – Online Variable Values .....	151
State Machine in CFC .....	123	Watch List with Execution Points and Flow Control .....	152
Recommended Practice – Set all VAR_OUTPUT Variables on Every Entry Action .....	124	Flow Control.....	153
Hints for Approaching a State Machine Design ..	125	Force and Write .....	154
LAB: Implement the Traffic Light in SFC.....	126	Browse Definition, Call Tree, Cross Reference ...	155
LAB: Extra Credit .....	127	Warning: Cross Reference does not work well with Function Blocks.....	156
LAB: Extra Credit Answer .....	128	Project Compare .....	157
LAB: More Extra Credit.....	128	Reset and Clean .....	158
Chapter 7: Structured Text.....	129	Starting with a Clean Project .....	159
Introduction to Structured Text .....	129	Device Log.....	160
ST Statements: Assignments and Calls.....	130	Messages View .....	161
Assignment Operators and Precedence.....	131	Message Pragmas .....	162
IF THEN ELSE ELSIF Conditional Statement .....	131	Exclude From Build .....	162
CASE Conditional Statement .....	132	POU for Implicit Checks .....	163
FOR Iteration Statement .....	133	Online Change.....	164
WHILE Iteration Statement .....	134	Operating Mode .....	164
REPEAT Iteration Statement .....	135	Core Dump.....	165
Other Language Elements .....	135	Trace .....	165
ST Options and Features .....	136	LAB: Debugging.....	166
Using Expressions in place of Variables .....	137	Chapter 9 : POUs: Programs, Functions, and Function Blocks.....	167
Enumerations – Putting a Name with a Number	137	POUs .....	167
Accessing FB Input and Output Variables .....	138	PROGRAMS .....	168
State Machine in SFC and ST .....	139	Functions.....	169
Alternative ST State Machine.....	140	Standard Functions.....	170
LAB: Implement a Traffic Light in Structured Text .....	141	Function Block .....	171
Extra Credit – Use a TON.....	142	Comparison of Programs to Function Blocks.....	172
Extra Credit.....	143	Function Block as a Data Type .....	173
Extra Exercises.....	143	Multiple Instances of a Function Block.....	174
Chapter 8: Advanced Debugging.....	145	Declaring Instance of Function Blocks .....	175

Comparison of POU Types .....	176	LAB: Overview .....	206
Language Agnostic .....	176	LAB: Continuous Function Chart .....	207
Input and Output Variables .....	177	LAB: Continuous Function Chart continued .....	208
Accessing FB Input and Output Variables .....	178	LAB: CFC Parameters .....	209
Accessing FB Input and Output Variables .....	179	LAB: Extra Credit.....	210
Accessing FB Input and Output Variables in LD..	179	Chapter 11: Object Oriented Industrial Programming	
Method: A Function that <i>Belongs</i> to a Function		.....	211
Block.....	180	OOP vs OOIP .....	211
Other Variable Scopes .....	181	Why OOIP? .....	213
Difference between Methods, Actions, Transitions,		Evolution from Flat Programming .....	213
and Properties .....	182	Task-Oriented vs Object-Oriented .....	214
Input Assistant and Auto Declare .....	183	Encapsulation, Abstraction, and Interfaces.....	215
Nine Ways to Initialize Variables .....	184	Sample Analog Input Object.....	215
Cross Reference does not work well with Function		Analog Input Object used in Plant Design .....	216
Blocks .....	187	Object of Objects.....	217
LAB: Converting a Program to a Function Block .	188	Example of Object Oriented Plant Hierarchy .....	218
LAB: Extracting Code to a Function.....	189	The Plant View.....	219
LAB: Extra Credit .....	190	Control and Equipment View (C&E) .....	220
LAB: Extra Credit 2 .....	190	Control View.....	220
Chapter 10: Continuous Function Chart (CFC).....	191	Motor View.....	220
Continuous Function Chart (CFC) Overview .....	191	Variable Naming Convention .....	221
CFC for Hierarchical Design.....	192	Hierarchical vs Flat Design – Best Practice .....	222
CFC vs LD .....	193	IO and Configuration Mapping in OOIP.....	223
CFC for Block-Based Design .....	194	Hard-Coded Configuration and I/O Mapping.....	223
CFC for the Trunk and Branches .....	195	Object Oriented Configuration and I/O Mapping	
CFC Basics .....	195	.....	224
Editing Basics .....	196	Sample of an Actual Configuration/Persistence CSV	
Editing Pins and Blocks .....	198	File .....	225
Auto Data Flow .....	200	I/O Mapping as a Configuration .....	226
Using Methods to simplify your CFC.....	201	Future Enhancement.....	226
Page Oriented CFC .....	201	Plant-Level Simulation.....	227
Lines Color-Coded by Data Type.....	201	Simulation Code .....	228
Parameters in Function Block.....	202	Simulation Model .....	229
Parameters Offline and Online .....	203	Simulation Results .....	230
Input and Output Toolbox Elements .....	204	Fully Automated Test .....	230
CFC Productivity Hints .....	204	Other OOIP Resources.....	231
Which IEC 61131-3 Language is Best? .....	205	LAB: Object Oriented Industrial Programming	
Multi-Language Hierarchical Plant Design.....	206	Examples.....	232

LAB: Extra Credits.....	232	LAB: Extra Credit – Protect code with a Semaphore .....	261
Chapter 12: User Defined Types (DUT) .....	235	Chapter 14: Introduction to I/O and Fieldbuses.....	263
Arrays .....	235	Local I/O – Adding to Device.....	263
Two or Three Dimension Arrays.....	236	Local I/O – Configuration .....	264
Array of Array .....	237	Remote I/O – Adding an Ethernet Fieldbus Device .....	265
Limiting the Display Range of an Array .....	237	Remote I/O – Installing a Device from an EDS File .....	266
Variable Length Arrays .....	238	Remote I/O – Configuring an Ethernet/IP Device .....	266
Structures .....	239	Remote I/O – Configuring a Modbus Slave .....	267
Array of Structures .....	240	I/O Update .....	268
Structure Initialization.....	240	Online Config Mode.....	268
Structure Pins .....	241	LAB: Overview.....	269
Structures and Arrays in CFC.....	242	LAB: Fieldbus Slave .....	269
Enumerations – Putting a Name with a Number	243	LAB: Fieldbus Master .....	270
Enumeration Numbering.....	244	LAB: Connecting the Master and Slave.....	271
Union .....	246	Chapter 15: Libraries and Library Manager .....	273
Union – Example .....	246	Overview.....	273
Union – Example 2 .....	247	Types of Libraries.....	274
Union and Structure for Fieldbus Mapping.....	248	Library Repository.....	275
Using a Function Block as a DUT .....	249	Library Repository Locations .....	275
Alias .....	249	Library Manager Overview .....	275
LAB: Replacing loose data with a Data Structure	250	Library Manager.....	276
LAB: Extra Credit .....	251	Adding a Library to the Application .....	277
Chapter 13: Task Manager and Tasks .....	253	Download Missing Libraries.....	277
Task Configuration Object.....	253	Library Properties .....	278
Task Assignment and Priority.....	254	Placeholders.....	279
Types of Tasks .....	254	Available Libraries.....	280
Watchdog Timer and Sensitivity .....	255	UTIL Library.....	280
Sensitivity Multiplier .....	256	CODESYS Automation Alliance (CAA) .....	281
Sensitivity with other Cycle Types.....	256	CODESYS Store .....	281
System Events .....	256	OSCAT Basic Library contents .....	282
Recovery from a Watchdog Timeout .....	257	IIoT Library .....	283
Task Monitoring .....	257	Other Common Libraries .....	283
Multithread Multicore .....	258	PLCOpen Common Behavioral Library (CBML) ...	283
LAB: Create Fast and Slow Programs and Tasks..	260	Creating a Library.....	284
LAB: Extra Credit – Event and Status Driven Tasks .....	261		
LAB: Extra Credit – Create a System Event.....	261		

Library Information.....	285	Using Images in Visualization .....	312
Library Properties .....	286	Dynamic Images .....	313
Saving a Library .....	287	Displaying Motion Pictures.....	313
Customizing a Library with a Parameters List.....	288	Image Element Scaling Modes .....	314
Documenting Libraries with restructured Text ..	288	Webvisu Scaling Modes.....	315
Library Guidelines .....	289	Code Interface (aka Declaration Area) .....	315
Package Designer .....	289	Dialogs .....	316
LAB: Create a New Library containing your Traffic Light FB .....	290	Local Variable in a Visualization .....	317
LAB: Install and Use the new Library .....	291	Traditional Visualization – Copy/Paste/Edit.....	318
LAB: Extra Credit .....	292	Reusable Visualization Block .....	318
Chapter 16: Introduction to Visualization .....	293	Building a Visualization for a Function Block .....	319
Benefits of CODESYS Visualization.....	293	Placing and Associating a Visualization Block ....	320
Visualization Hardware Options .....	294	Placing a Visualization Block into a Frame .....	321
Visualization Manager .....	295	Placing and Associating Multiple Visualization Block .....	322
Visualization Manager – Options.....	296	Single-Tag Plant-Level Connectivity .....	322
Configuration and Properties .....	296	Object Oriented Industrial Visualization .....	323
Visualization Editor .....	297	VisuSymbols.....	324
Visualization Toolbox.....	298	VisuElement Toolkit – For Device Manufacturers .....	324
Common Input and Output Elements.....	299	Other Visualization Features .....	325
Text Field – Value Output .....	300	LAB: Create a Reusable Visualization Block.....	326
Displaying Enumerated Text.....	300	LAB: Instantiate a Visualization Block into a Visualization .....	327
Visualization Productivity .....	301	LAB: Text Fields.....	328
Fixed Properties .....	302	LAB: Extra Credit.....	329
Programmable Properties.....	303	Chapter 17: OPC-UA and Peer to Peer .....	331
Rotation and Interior Rotation .....	304	OPC and CODESYS OPC-UA Server .....	331
Combining Rotation and Interior Rotation .....	304	Adding the Symbol Configuration Object.....	332
Input Configuration – Action on Mouse Events..	305	Selecting Variables to Expose.....	332
Input Configuration – Input Values.....	306	Exposing by Attribute .....	333
Input Configuration – Change Pages .....	307	OPC-UA Supports DUTs .....	333
Input Configuration – Changing Visualization in a Frame .....	308	Optional OPC-UA Settings .....	334
Input Configuration – Execute ST Code .....	309	OPC-UA Client.....	334
Input Configuration – Transfer Files between Visualization and PLC.....	310	Data Source Manager – CODESYS Application ...	335
Input Configuration – Security and User Management .....	311	Data Sources Manager – Specifying Sources .....	336
Input Configuration – Access Rights Visualization Elements .....	312	Data Sources Manager – Specifying Sources .....	337
		Data Source Manager With OPC-UA Client.....	338

DSM with UA Client – Variable List .....	338	Techniques to Manage Persistent Variables .....	362
DSM with UA Client – Selecting and Using Variables .....	339	Recipes: A Spreadsheet of Data.....	363
IIoT Libraries.....	340	Adding a Recipe Manager and Recipes.....	364
Network Variables.....	340	Recipe Manager.....	364
Network Variables – Sender.....	341	Recipe Definitions.....	365
Network Variables – Receiver .....	342	Adding Variables to a Recipe Definition .....	366
Mapping Network Variables to/from Objects.....	343	Adding Recipes.....	366
Other Peer to Peer Options.....	344	Recipe Commands .....	367
Comparison of Peer to Peer Sharing Options .....	344	Programmatic Recipe Management.....	368
LAB: OPC-UA Server .....	345	CODESYS Persistent Variables.....	369
LAB: Access OPC-UA Server with Data Source Manager .....	346	Periodically Storing and Restoring Persistent Variables .....	370
LAB: Extra Credit –CODESYS OPC-UA Client.....	347	Saving Persistent Variables on an Unhandled Exception .....	371
LAB: Extra Credit – Use UaExpert™ .....	348	Persistent Variables –Impact on Function Blocks .....	372
LAB: Extra Credit – Misc .....	349	Combining Persistent Variables with Recipes for Human-Readable Files .....	373
LAB: Extra Credit – Data Source Manager.....	349	ControlSphere Central Configuration Service (CCS) Library .....	374
LAB: Extra Credit – Network Variables.....	349	ControlSphere CCS Library – Designed for Distributed Objects.....	375
Chapter 18: Security.....	351	CCS Library – Storing, Restoring, and File Format .....	375
CODESYS Security Overview.....	351	CCS Library – How it Works .....	377
1. Project Permissions – Configure an Owner.....	352	CCS Library – Future Enhancement .....	378
1. Project Permissions – Create Users and Groups .....	352	CCS Library – Actual Configuration/Persistence File .....	379
1. Project Permissions – Objects .....	353	LAB: Create Recipes for Traffic Light Timing.....	380
1. Project Permissions – Actions .....	353	LAB: Writing Recipes.....	381
1. Project Permissions – Logging on/off.....	354	LAB: Recipes Extra Credit.....	382
2. Project File Encryption .....	354	LAB: Extra Credit CODESYS Retain/Persistent ....	382
3. IDE to Device Connection Encryption .....	355	LAB: Working with the CCS Library – Configuring Objects.....	383
4. Device Security.....	356	LAB: CCS Library – Adding Configurations .....	384
4. Device Security – OPC-UA .....	356	LAB: CCS Library – Adding Instances.....	385
4. Device Security – Creating an OPC-UA Certificate .....	357	LAB Extra Credit: CCS Library – Add Persist File to the Application.....	386
4. Device Security – OPC-UA Sets.....	358	Chapter 20: Trace and Trend .....	387
4. Device Security – Access Rights.....	358	Introduction to Trace.....	387
LAB: Setup Users and Groups.....	359		
LAB: Extra Credit .....	360		
Chapter 19: Persistence and Recipes .....	361		
Categories of Variables .....	361		

Trace Basics.....	388	SubVersion Revision Control and Check-In / Check-Out.....	413
Adding a Trace .....	388	SubVersion – Project Compare.....	413
Trace Configuration .....	389	Static Analyzer .....	414
Configuring the X Axis.....	391	Static Analyzer – continued.....	415
Configuring the Y axis (Adding Diagrams).....	392	Profiler.....	416
Adding Variables to the Y Axis .....	393	Test Manager.....	417
Starting the Trace .....	394	PDE on the CODESYS Store.....	418
Trace Tools.....	395	The CODESYS Store.....	418
Visualization Trace Element.....	396	CODESYS Store – Sample of Contents .....	419
Trend and Other Information .....	396	Application Composer – Code Generator .....	420
LAB: Building a Trace .....	397	Single-License (SL) Runtimes .....	421
LAB: Viewing a Trace and Setting a Trigger .....	398	Automation Server .....	421
LAB: Extra Credit – Add a Trace Vis.....	398	Matlab™ Simulink™ Importer.....	422
Chapter 21: Alarm Manager .....	399	Demo Projects .....	422
Introduction to Alarm Manager.....	399	Access to Runtime File System (File I/O).....	422
Alarm Class Overview .....	400	Matrix Library .....	423
Alarm Class Options .....	401	Control Loop Library.....	423
Alarm Group Overview .....	402	Developing Libraries for the CODESYS Store.....	424
Alarm Group Details .....	402	Security Keys and Packages.....	424
Alarm Group – Additional Hints.....	404	Chapter 23: Miscellaneous.....	425
Alarm Storage .....	405	Controller Handling .....	425
Alarm Visualization .....	406	Source Upload and Download.....	426
Alarm Table – Additional Controls.....	406	Import/Export.....	426
Object Oriented Alarming (OOA) – Registering Alarms.....	407	Generic Data Types – ANY_<type> (polymorphism) .....	427
Object Oriented Alarming (OOA) – Triggering Alarms.....	408	Online Change .....	428
Other Information.....	408	Online Change Memory Reserve.....	429
LAB: Extra Credit .....	408	Online Editing .....	430
Chapter 22: Professional Developers Edition .....	409	External File .....	431
CODESYS PDE Tool Suite .....	409	AND_THEN and OR_ELSE Short Circuit Operators .....	431
Unified Modeling Language (UML) Editors.....	409	Pragmas .....	432
UML – Class Diagram .....	410	Conditional and Unconditional Pragmas.....	432
UML – State Chart.....	411	Multi-Language Support – TextList .....	433
SubVersion and GIT.....	412	Python Scripting .....	433
SubVersion Operations .....	412	Unit Conversion.....	434
SubVersion in the Device Tree.....	412	C Code Module .....	435
SubVersion – Logging Changes .....	413		

Installing Package – Where did it go???	435	Lab: Pure OOP Traffic Light Example	461
LAB: Extra Credit	435	Chapter 25: Final Project	463
Chapter 24: Object Oriented Programming	437	Final Project – Bottling Plant	463
OOP vs OOIP	437	Optional Achievement Levels	464
OOP: Inheritance	438	Bachelors Level – Bottler System Diagram	465
Difference between Composition and Inheritance	439	Bachelors Level – Hints	465
OOP: Methods	439	Bachelors Level Hints – OOIP Example	466
Methods – Pass Data and Initiate Action	440	Bachelors Level Hints – Process Sequence	466
Access Specifier	441	Bachelors Level – Additional Hints	467
OOP: Properties	441	Bachelors with Honors Level – Visualization	467
Properties – Assign Values and Initiate Action	442	Masters Level – Bottler System Diagram	468
Access to Parent Variables, Methods, and Properties	443	Masters with Honors – Bottler System Diagram	468
Polymorphism – Overriding Methods	444	Masters with Distinction – Plant with Multiple Bottlers	469
More Polymorphism	445	Masters with Distinction – Configure with CCS Library	469
Extended Structures in Extended Function Blocks	445	Masters with Distinction – Add Settling Time to the CSV	470
Extended FB – Traditional Scanned Approach	446	Masters with Distinction – Supplemental	470
OOP: Inheritance and Event-Driven Programming	447	Masters with Distinction – File I/O	471
Alternate Technique using Composition	448	Masters with Distinction – Persistent Variables	472
Base-Class Calls Derived-Class Methods	449	Ph.D. Level	472
Pop Quiz – Inheritance and Polymorphism	449	Master Professional Engineer	473
Answers to Pop Quiz	450	Index	475
VAR_IN_OUT, Pointers, and References	450	Detailed Table of Contents	481
Reference Variables – “Under the covers” Pointers	451		
Addresses and Pointers	452		
Stored Pointers and Online Change	453		
OOP: Interfaces	454		
Interface Example – Day or Night	455		
Using Interfaces to Auto-Register Instance of Objects	456		
Interfaces in ControlSphere CCS Library	457		
LAB: Pointers	458		
LAB: Extra Credit	459		
LAB: Inheritance	460		
LAB: Interface and Event-Driven Programming	461
