

# **AWS IoT Core Client**

The "AWS IoT Core Client" library allows for the exchange of messages via the "AWS IoT Core" Amazon Service.

The library "AWS IoT Core Client" is now part of the product <u>lloT Libraries SL</u> and is no longer available as single product.

## **Product description**

The "AWS IoT Core" service is a managing cloud platform from Amazon in which connected devices can work together easily and safely with cloud applications and other devices. The "AWS IoT Core Client" library provides function blocks for sending and receiving messages. Communication is encrypted and takes place by means of the MQTT protocol. In the AES environment, messages are typically transmitted in JSON format. The "JSON Utilities" library can be used for parsing and creating JSON files (https://store.codesys.com/json-utilities.html).

The following function blocks are included in the library:

- AWSIoTClient: Function block for establishing a connection to "AWS loT Core"
- AWSIoTPublish: Function block for publishing messages (Publish)
- AWSIoTSubscribe: Function block for subscribing to a topic (Subscribe)
- AWSIoTGetDeviceShadow: Function block for reading the "Device Shadow"
- AWSIoTUpdateDeviceShadow: Function block for refreshing the "Device Shadow" data
- AWSIoTSubscribeDeviceShadow: Function block for subscribing to "Device Shadow" changes

## **Supported functions**

- Publishing and subscription of messages based on MQTT V3.1.1
- TLS encryption
- Authentication via client certificate
- Support of "Quality of Service": 0 and 1 (QoS0, QoS1)
- Data type "Topics": WSTRING
- Maximum size of a topic: 1024
- The maximum package size and payload size can be configured by means of a parameter list.
- Multitasking and multicore support
- Support of "Last Will" messages (QoS0, QoS1)
- Support of wildcards (# and +)

The sample project "AWS\_loT\_Core\_Client\_Example.project" is installed in the target directory. The application AWSDeviceShadow demonstrates the reading and writing of the "Device Shadow". The application AWSPubSub demonstrates how messages can be published and subscribed to by means of the included function blocks. The application AWS\_JSON\_DeviceShadow demonstrates how a device shadow can be updated via the JSONBuilder functionality.

## Installation of a client certificate

Devices for "AWS IoT Core" are authenticated by means of client certificates. The client certificate can be created and downloaded with a Certificate Signing Request (CSR) in the AWS Management Console. Then the certificate can be installed on the corresponding device.

To perform the subsequent steps, the CODESYS package "CODESYS Security Agent" and "OpenSSL" must be installed on the PC.

#### Download links:

- CODESYS Security Agent: https://store.codesys.com/codesys-security-agent.html
- OpenSSL: https://www.openssl.org

#### Steps for creating and importing a client certificate:

- 1. Create a device in "AWS IoT Core" (see https://docs.aws.amazon.com/iot/latest/developerguide/registerdevice.html).
- 2. Open the application AWSPubSub in the sample project.
- Set the end point to the input AWSIoTClient.sHostname (for example, xxxxxxxxx.iot.yyyyyyy.amazonaws.com).
- 4. Set the device names (name of thing) to the input AWSIoTClient.sClient.
- 5. Download and start the project.
- 6. Open the PLC shell (Device -> PLC-Shell).
- 7. Specify cert-getapplist. -> A component with the specified device name and a number is displayed.
- Specify cert-createcsr <number> and use the number from step 7. The creation of the CSR file can take several seconds. A corresponding message is displayed in the device log (Device -> Log) after it has been created.

cert-g	cert-getapplist								
Nr.	ComponentName	CommonName		CertAvailable	DateNotBefore	I	DateNotAfter		Thumbprint
 0 1 2 3 4 5	CmpSecureChannel CmpApp CmpWebServer Device2 f2c02f87af574f7231a13	OPCUAServer@LangRoNB LANGRONB LANGRONB LangRoNB Device2 6543044ada07434e974 Device3	FALSE TRUE FALSE	FALSE FALSE FALSE 2018-8-28T9:20	  0:26.0	 - 2049-12-31T23:55 	  9:59.0		
 cert-c	reatecsr 5								
Create	CSR for application vi	th given index. Check logger	to see when fir	ished.					
cert-cre	atecsr 5								~

9. Open (Device -> Files) and copy the CSR file from the cert/export directory to the local file system.

Information							

- 10. Currently, the format of the exported CSR file is not yet supported by AWS. Until the problem is solved, the file must be converted via OpenSSL. Execute the following command in order to convert the format: openssl.exe req -in YOUR.csr -inform der -out YOUR.csr
- 11. A certificate can now be created in the AWS Management Console ("Create with CSR") with the YOUR.crt file. (see https://docs.aws.amazon.com/iot/latest/developerguide/create-device-certificate.html)
- 12. Download the certificate and root certificate.
- 13. Security Screen -> Install the devices and certificate in "Own Certificates". Install the root certificate in "Trusted Certificates".

- 14. Menu bar: Online -> Reset Cold. Start the project.
- 15. The output AWSIoTClient.xConnectedToBroker should be set to TRUE. -> The connection has been established.

## **General information**

#### Supplier:

CODESYS GmbH Memminger Strasse 151 87439 Kempten Germany

## Support:

https://support.codesys.com

Item: AWS IoT Core Client Item number: 2111000029 Sales: CODESYS Store https://store.codesys.com

#### Included in delivery:

CODESYS package with library, sample project, product data sheet (en, de), and CHM help

### System requirements and restrictions

Programming system	CODESYS Development System V3.5.14.0 or later				
Runtime system	CODESYS Control V3.5.14.0 or later				
Supported platforms and devices	Note: Use the "Device Reader" project for locating the functions in the CODESYS Store free of charge.				
Additional requirements	AWS Account (AWS IoT Core)				
Restrictions					
Licensing	Workstation license				
Required Accessories	CODESYS Key for CODESYS < 3.5.14.0				

Note: Not all CODESYS features are available in all territories. For more information on geographic restrictions, please contact sales@codesys.com.

Note: Technical specifications are subject to change. Errors and omissions excepted. The content of the current online version of this document applies.
